

First Results Survey

Ronald van der Pol

<rvdp@sara.nl>

- ▶ **Survey went out Wednesday February 16**
- ▶ **Thursday 24 February: 17 filled in the questionnaire**
- ▶ **Some seem to have timeout problems**

Have you ever used the GLIF infrastructure or provided services over it ?

Regularly	9
A few times	5
Never	2

When (potentially) using the GLIF infrastructure, what describes your role best?

End User	2
Campus	3
NREN/Regional	7
(Trans)national	4

Have you or your organisation attended a GLIF meeting?

5 or more	11
4x	0
3x	3
2x	0
1x	0
Never	2

What do you expect from the Campus Networking Task Force? (more than one answer possible)

BCP	13
NREN + Campus in contact	9
Share demo experiences	9
Other	2

What communication channels would you like to use for discussing the needs and requirements of campus networkers? (more than one answer possible)

Mailing list	13
Wiki	10
Telconfs	4
Meetings & Workshops	11

What do you think the major technical issues are with lightpath services on campus?

- ▶ **Issues in part campus edge and end user**
 - ▶ Not enough available bandwidth
 - ▶ No domain controller, must support variety of equipment
 - ▶ Lack of integration, campus not designed for BoD
 - ▶ Campus NOC needs to provide service for only a few users
 - ▶ Security issues, operational procedures difficult
- ▶ **Outdated infra, ill managed equipment and provisioning**
- ▶ **Extra cost to network infrastructure**

What do you think the major non-technical issues are with lightpath services on campus?

➤ **Organisation**

- **Convince management to support BoD**
- **Coordinate with various stakeholders at the campus**
- **Alignment with local business and technical strategy**
- **Alignment with local policies**
- **Campus networkers do not always speak English**

➤ **Security concerns**

- **Spend time and money on new service, who gets the bill?**
- **Promote BoD to high end users**

Further remarks

- ▶ It may be helpful to provide some examples as a GLIF document so that the user can negotiate with his/her campus networking engineers to provide a lightpath.
- ▶ I would like to share best practices with both a technical and non-technical focus of lightpath needing projects.
- ▶ I see GLIF promoted as an infrastructure (at the setup and some years after that also) it was not seen as an infrastructure, but as a cooperation of networks. So something has changed?
