

Inter domain Topology Exchange

- Do not want to reinvent the wheel
- Only for inter domain, NOT intra domain
- Want to be very specific and not boil the ocean
- What exist today?
 - _PerfSONAR
 - _MonALISA
- Vendors? What can they contribute?
- How will GOLEs be represented vs. NRENs?
- Can we assume multilayer, but simplify the problem for an early prototype
- Work w/ Fenius and Dynamic GOLE task forces to determine minimum needed

Inter domain Path Computation

- Do not want to reinvent the wheel
- Only for inter domain, NOT intra domain
- Want to be very specific and not boil the ocean
- What exist today?
- Each of the NRMS have an intra domain path computation
- Keep it very simple and determine the minimum information needed to provide an inter domain path

Resource AuthN Policy

- Do any of the existing NRENs have Policy written down?
- Concentrate on baby steps.....
- Document in human readable terms first
- Translate to machine language
- Start with networks involved in other demos
- Determine which mechanism the GLIF community wants to agree to
